## FLATTING

Transparent varnish for wood

### DESCRIPTION

FLATTING is a product based on synthetic resins, recommended for painting internal and external wooden supports. This product has an excellent elasticity which follow the structural variations, typical of the wood.

Moreover the paint provides shine to the treated surface and excellent outdoor resistance. The film applied also gives a protective and decorative effect with a touch of glossy.

### APPLICATION

#### NEW WOOD SURFACES:

- Sand to remove any raised wood flakes.
- The substrate has to be well prepared and suitable for coating, so make sure the wood is not damp.
- Level out imperfections with PASTA STUCCO.
- Sand the grouting and then eliminate dust deposits.
- After 6-12 hours, proceed with the support impregnation treatment using IMPRELEGNO or IMPRECOLOR.
- Lightly sand the surface and apply with brush or spray, 1 or 2 coats of FLATTING, which has to be thinned up with ACQUA RAGIA (white spirit), in the following percentages: approx 5 -10%.

#### Pre-PAINTED WOOD SURFACES:

- Verify the condition of the old paint. Scrape off any loose flaking and poorly adhering coating.
- Proceed as for the new wood surfaces from second point onwards
